Where a Fund has a particularly concentrated portfolio and a particular investment declines or is otherwise adversely affected, it may have a more pronounced effect than if the Fund held a larger number of investments. The Fund invests in a limited number of market sectors. Compared to investments which spread investment risk through investing in a variety of sectors, share price movements may have a greater effect on the overall value of this fund. The fund typically invests in smaller company shares which can be more unpredictable and less liquid than those of larger company shares. The fund invests in economies and markets which may be less developed. Compared to more established economies, the value of investments may be subject to greater volatility due to increased uncertainty as to how these markets operate.
